Are you looking for **Point of Sale Software**? Idealpos is proudly Australian owned and developed right here in Australia! If you are looking for a complete POS System, then Idealpos is the right choice for your Point of Sale System.

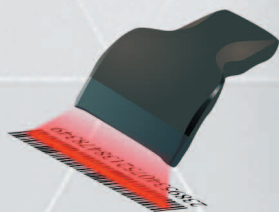

Suitable for both Hospitality and Retail businesses, Idealpos main features are available in add-on modules, so you only need purchase the features you require. Idealpos POS Software is easy to use and your staff will quickly learn how to use the POS System. The POS Screen is intuitive and customisable to suit your business. Simply program your POS Screen layout with the functions you require and set your preference of colours, fonts, button sizes and more. There are many ways to sell items when processing a sale using Idealpos, including the use of Barcode Scanning, Interfaced Scales, Touch Screen Button entry and more.

Barcode Scanning

Barcodes are used in Idealpos for the fast entry of stock items using a barcode scanner or for Stocktake with the use of a PDE. Scanning can also be used with Customers for Bar Tabs, Accounts and Memberships. They are also available for use on Clerks, Gift Vouchers, Credit Notes, Receipts, Labels and some Tenders.

- Allows fast, accurate entry of stock items during a sale.
- Barcodes are used for Stock Control, Customers, Bar Tabs, Accounts and Memberships.
- Barcodes are also useful for Receipts, Clerks, Gift Vouchers, Coupons and Labels.

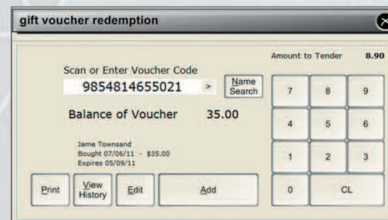

Credit Notes

Credit Notes are used for the returning of goods into your store, but instead of giving them back the tender they purchased with, you give them a Credit Note to the value of those goods in your store. It acts like a Gift Voucher in that it cannot be redeemed for cash, and must be spent in your store.

- Used instead of cash refund to spend value in-store.
- Pre-program up to 10 reasons why customer requires a Credit Note.

Gift Vouchers

Gift Vouchers can be sold through Idealpos and redeemed at a later date which you can decide. Gift vouchers enable you to keep track of purchased vouchers in case of loss or theft. Gift vouchers can be linked to your custom stationary, gift cards or Idealpos can print the voucher out of the receipt printer.

All Gift Vouchers are tracked and monitored through Idealpos, making it easy to replace a lost Gift Voucher. Each time a Gift Voucher is used, the amount of the sale will be deducted from the original voucher, and a new voucher will be printed with the remaining balance.

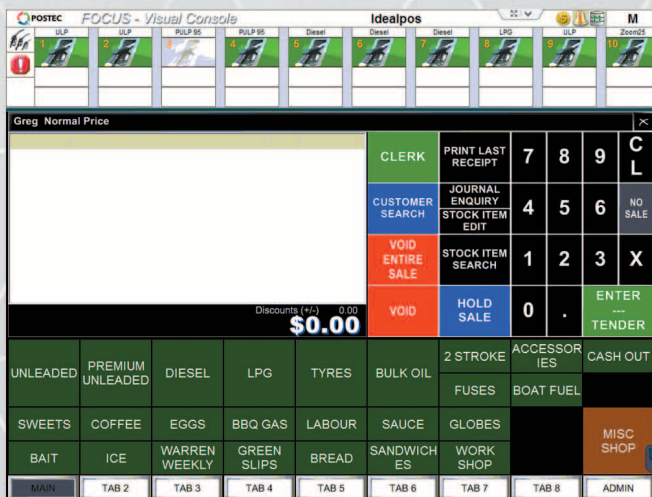

- Fully tracked and monitored through Idealpos.
- Can be used on gift cards, custom stationary or Idealpos will print a receipt.

Fuel Console

Idealpos has the ability to offer a professional and integrated solution for service stations that also want to use the Idealpos Point of Sale System. Many systems cannot integrate between the services that are required in these unique environments, but the solution provided by Idealpos can do just that and more.

Although it seems like a simple thing, to put a POS System into a service station, it is anything but. Service stations on their own require professional and regulated equipment that performs time and again with repeated use, usually by the general public who give no thought to how fuel is delivered, stored, supplied and equated.

- Fully certified direct integration with industry leading POSTEC Fuel Console.
- Ability to use Discount Fuel Vouchers.

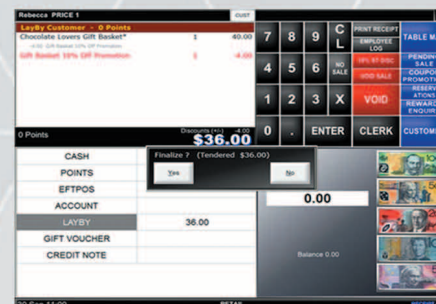

Labels

Idealpos can create labels that can be printed out onto various mediums for use with barcode scanners. Stock Items, Customers and Promotions can be printed using various label settings. Labels can be printed to an A4 sheet or printed through a supported continuous printer.

- Create and print barcodes for Stock Items, Shelves and Customers for memberships.
- Print on A4 sheets or to a continuous Zebra printer.

Layby

Laybys are used to give the customer a specified time period to pay a purchase off, before taking the goods home. The customer can make a deposit on the item, which will then be held in storage by the retailer until the goods have been totally paid off, or the customer cancels the layby.

Laybys are most commonly used in the retail sector for goods that do not perish. You have the ability of setting the length of time customers can leave an item on Layby, and also how much deposit is required.

- Create custom receipt containing all your layby conditions.
- Adjust length of layby term and value required for deposit.

Scales

Idealpos interfaces to various models of scales to measure the weight of products and translate that weight into a quantity. Supported Scale Models are:

Idealpos Interfaces to many popular Scales including Mettler Toledo, CAS, PSC and NCR to name a few.

The price per kilo/lb is entered against the stock item, and when the button is pressed on the POS terminal, the weight is retrieved from the scale and the price is calculated.

Integrated EFTPOS

Idealpos supports several two-way interfaces to EFTPOS Terminals for Australia, New Zealand and Canadian markets.

By connecting your EFTPOS to your Point of Sale System, you help eliminate operator error by sending the sale and cash out amount to the EFTPOS terminal. The EFTPOS terminal will connect to the bank and upon approval will return an approval response so that the operator is able to finalise the sale.

- Certified and integrated with many EFTPOS providers including PC Eftpos, Tyro, Mercury Payments and many more.
- Helps speed up service and maintain security of customers card details.

E-commerce Integration

Idealpos WebIT is a Webstore Interface Module allowing for Stock Items within your Idealpos database to be sold on a Webstore, either eCommerce or Shopping Cart website. The interface is 2-way, which allows for orders that have been placed online to be directly processed through Idealpos.

Customer Accounts

Idealpos has a fully integrated Customer Accounts function built into the POS Screen. You can sell items as you normally would, and rather than tendering the sale to cash or Eftpos, you can finalise on Account. You can create Customer Accounts in Idealpos and apply payments, adjustment and credits as required.

From the Back office menu, you can produce a Customer Trial Balance to get an up to date list of outstanding customer balances. Customer Invoice and Customer Statements can also be printed or emailed.

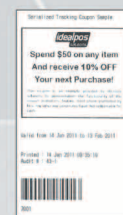

If you run a larger style of venue, have multiple terminals or simply wish to manage your POS system from home, then Idealpos is the perfect choice. Idealpos supports multiple POS Terminals, multiple Locations and multiple sites. Idealpos has real time communications across a local area network or wide area network using a Virtual Private Network.

Promotions is a very powerful feature within Idealpos to provide business with automated discounts within a sale. With Promotions, you can create as many promotion tables as you like, so when the sale is finalised, the Idealpos software will check through all the items within the sale, and then apply the appropriate discounts.

Up to 3 Trip Conditions can be set by quantity or amount and you can select a group of items within a department or individual stock items.

Coupons

The Coupon Promotions feature is similar to normal Promotions where an automatic discount is applied once trip conditions are met; however, instead of discounting the current sale, a coupon is printed at the end of the sale and can be used to provide a discount for a future sale.

Rewards, Loyalty

Idealpos can record sales against each individual customer, offering promotions and individual discounts for loyal customers. Rewards can be free items, discounts or services, all tracked and managed through the software.

- Reward your customer's loyalty using rewards points and membership levels.
- Track customer purchases and reward them with promotions.

Download on the
 **App Store**

Stock Manage App

Idealpos Solutions would like to introduce you to our very first mobile application called Stock Manage, for the iPod touch, iPhone and iPad devices.

Stock Manage is for use with the Idealpos Point of Sale software to help streamline the procedure of performing Stocktakes, Transfers, Receiving Stock and Adding Barcodes. It allows data to be transferred wirelessly over the network directly into the Idealpos database in a minimal amount of time.

PayPal Point of Sale

Accept mobile payments at point of sale with PayPal Integration.
